BUILT IN THE OPEN

Your work lives across devices. Its context does not.

Knowledge workers spend most of their waking hours moving between screens. Yet the tools carrying the work remain disconnected.

APP SILOS

Apps on the same device do not share enough context.

DEVICE SILOS

The phone, desktop and other devices remember different fragments.

HUMAN MIDDLEWARE

People search, copy, repeat and reconnect the context themselves.

LOST JUDGMENT

Useful decisions and conversations disappear between systems.

The devices see the work. The system does not understand the person.

Give every knowledge worker a private chief of staff.

The kind of support once reserved for people who could hire it. Personal, contextual and on-device.

PLANS THE DAY

Turns priorities and commitments into a workable plan.

PREPARES THE PERSON

Builds the briefing before the meeting starts.

PROTECTS ATTENTION

Surfaces what matters now and delays what can wait.

STAYS ON-DEVICE

Uses personal context without sending that life away.

Free still has to fund the work.

Enterprise value can pay for consumer access.

ENTERPRISE VALUE

Organizations pay for important workflows that improve revenue, throughput and quality.

CONSUMER ACCESS

The enterprise business funds private, on-device intelligence for everyone.

Every enterprise should become an intelligent enterprise.

Its best knowledge and judgment reach every person at the moment of work.

MORE EFFICIENT

Work moves faster and costs less.

MORE EFFECTIVE

Decisions and outputs reach a higher standard.

NEWLY CAPABLE

People can do work the organization could not do before.

SAFE TO SCALE

AI remains reliable, auditable and compliant in regulated work.

Faster. Lower cost. Higher quality. New capability.

Implement AI without losing control.

OGAC gives you a reliable, auditable and compliant path from the first workflow to an intelligent enterprise.

USE YOUR ENVIRONMENT

Connect the data, systems and models already in place.

CONTROL EVERY RUN

Apply access, policy, guardrails and human authority.

PROVE WHAT HAPPENED

Retain evidence, lineage, evaluation and audit.

OPERATE RELIABLY

Observe, recover and improve production workloads.

OGAC is AWS for AI: one governed foundation beneath both enterprise wedges.

Every employee can build safe enterprise AI.

Lovable, Bolt or Replit for your enterprise: describe the app, agent or workflow in plain English.

INHERITS YOUR DATA

Uses approved sources and connectors already available.

INHERITS YOUR RULES

Applies organizational policies and access automatically.

INHERITS YOUR CONTROLS

Guardrails, evidence, audit and evaluation follow every run.

INCLUDES YOUR PEOPLE

Human review and sign-off remain part of the work.

Your people build the capability. OGAC supplies the enterprise controls.

Every managed device becomes an intelligent node.

OGAD and OGAM see, hear, remember and help locally. The sync layer shares only approved knowledge with the organization.

HELPS THE PERSON

Briefings, priorities and context arrive when the work happens.

KEEPS RAW DATA LOCAL

Screenshots, audio and conversations remain on the device.

GOVERNS THE SYNC

Policy, role and approval decide what can leave.

BUILDS ORGANIZATIONAL MEMORY

Approved facts, patterns and SOPs improve the whole enterprise.

Traditional device management controls the node. Off Grid makes the node intelligent.

Start with one important outcome.

An intelligent enterprise proves value one workflow at a time.

PROCESS MORE CLAIMS

The same team handles more cases with evidence and approval intact.

INTERVENE EARLIER

Identify delinquency risk and act before it rolls forward.

GROW CUSTOMER VALUE

Give relationship managers compliant next-best actions.

RELEASE RELIABLE AI

Gate models and workflows on quality, drift and policy.

Faster. Lower cost. Higher quality. Newly possible.
